

# FORKLIFTABLE CONTAINERS

Our forkliftable containers include a series of large bulk handling tubs for dry or fluid materials. These containers are available in various sizes, and we offer the option of flat bottom with four-way bolt on legs, or contoured bottom with two way entry. The bin boasts a hefty .375" thick average wall thickness and in the past have been used in food processing, recycling, toxic waste collection, transport, and rodent proof storage applications. Containers are nestable when empty for space saving transport or storage. Lids are available and allow containers to be stacked. These containers are CFIA approved.

Reference	Capacity	Description	Dimensions	Style
Part Number	Litre		Height	Color
